Windows 11 System Audit Report

Automated Security & Compliance Audit

1. Executive Summary

This report presents the results of an automated, read-only security and configuration audit of DESKTOP-H9H293O, executed on 18 September 2026 at 14:34:54. 113 checks were defined across 15 categories; 79 passed, 8 failed, 7 produced advisory warnings, 4 did not apply to this system, and 15 could not be verified (this run was not elevated; re-run as Administrator for full coverage). 3 checks returned a CRITICAL-severity failure.

[!] ADMINISTRATOR PRIVILEGES REQUIRED

This audit was NOT executed with administrator privileges. Checks that require elevation (BitLocker, local security policy, audit policy, the Security event log, TPM, Secure Boot) could not be fully verified and are reported below as UNABLE_TO_COLLECT rather than assumed safe or unsafe. Re-run this auditor as Administrator to obtain complete audit coverage.

3 CRITICAL findings require immediate attention.

2. System Information

Basic System Information

System / Computer Name	DESKTOP-H9H293O
Operating System	Microsoft Windows 11 Home
OS Version / Build	10.0.26200 (Build 26200)
OS Architecture	64-bit
Machine Architecture	AMD64
Supported Windows Version (10/11)	True
Service Pack	None
Windows Product ID	00342-21235-06951-AAOEM
Windows License Status	Licensed
Windows Directory	C:\WINDOWS
System Directory	C:\WINDOWS\system32
OS Install Date	2026-02-19
System Uptime (hours)	6.0
Processor / CPU	13th Gen Intel(R) Core(TM) i7-13700H (14 cores / 20 logical processors)
Installed RAM (GB)	15.7

Network Information

Connectivity	Not Connected
Network Interface	Wi-Fi
Wi-Fi Interface	Wi-Fi
Primary IPv4 Address	169.254.120.90
Primary MAC Address	6C-F6-DA-F3-F1-EC
DNS Servers Configured	InterfaceAlias: Wi-Fi, ServerAddresses: ['172.20.10.1']

Proxy Configured	False
Domain / Workgroup	WORKGROUP

Hardware / Platform Information

System Serial Number	5XKM324
BIOS Version	1.30.0
Firmware Type (UEFI/Legacy)	UEFI
Secure Boot Enabled	Unable to Collect (Unable to set proper privileges. Access was denied.)
TPM Ready	Unable to Collect (Administrator privileges required to read TPM state)
BitLocker Enabled (OS Drive)	Unable to Collect (Access denied)
Storage Volumes	D: 332.9GB free / 409.6GB; C: 200.1GB free / 520.3GB
Connected USB Devices	13 items
Bluetooth Adapter Present	True

3. Overall Security / Compliance Score

72.2% Compliance Share of applicable checks satisfied, weighted by severity.	23.6% Risk Score Weighted exposure from checks that FAILED.	83.2% Coverage Share of checks this run could actually evaluate.
--	---	--

Scoring Methodology

Every check contributes weight to its category and to the overall score according to its severity. A check only counts toward Compliance and Risk if it was actually evaluated (its status is PASS, FAIL or WARNING) and its severity is scored (INFO-severity checks are inventory/descriptive only and carry zero weight). Checks that ended NOT_APPLICABLE or UNABLE_TO_COLLECT are excluded from both denominators -- this is deliberate: it keeps a low-privilege run from scoring as artificially 'clean' just because most checks couldn't be evaluated. Coverage is reported alongside the score for exactly that reason.

Compliance Formula

engine/scoring.py, _score_subset() -- grouped by severity/status

Compliance % =

$$\frac{\text{Sum over each severity of} \\ (\text{No. of checks in that group} \times \text{Weight} \times \text{Credit for that status})}{\text{Total Weight} \\ (\text{sum of Weight over all scored, evaluated checks})} \times 100$$

In plain language: of the security requirements that actually applied and could be checked on this system, how many were satisfied -- weighted so a failed CRITICAL check counts far more than a failed LOW check.

Risk Formula

engine/scoring.py, _score_subset() -- grouped by severity/status

Risk Score % =

$$\frac{\text{Sum over each severity of} \\ (\text{No. of FAILED checks of that severity} \times \text{Weight of that severity})}{\text{Total Weight} \\ (\text{sum of Weight over all scored, evaluated checks})} \times 100$$

In plain language: what fraction of the applicable security weight is currently exposed because a check outright failed. A higher risk score means more -- and/or more severe -- failures.

Coverage Formula

engine/scoring.py, _score_subset() -- grouped by severity/status

Coverage % =

$$\frac{\text{No. of Passed} + \text{No. of Failed} + \text{No. of Warning checks}}{\text{Total No. of Checks}} \times 100$$

In plain language: how much of the framework this run was actually able to inspect. "Successfully evaluated" means PASS, FAIL or WARNING; "unable to collect" means the check needed data this run couldn't obtain (typically elevation); "not applicable" means the check's prerequisite didn't hold on this system (e.g. a Bluetooth check with no Bluetooth adapter present) -- neither of the latter two counts as coverage.

Example: Category-Level Calculation

To make the formulas above concrete, this example uses the actual results for the "Authentication & Access Control" category from this audit run: 10 checks total (4 passed, 0 failed, 0 warnings, 6 unable to collect), comprising 1 CRITICAL,

5 HIGH, 4 MEDIUM severity checks.

CRITICAL -> weight = 10 HIGH -> weight = 7 MEDIUM -> weight = 4

Checks Used in This Example

ID	Parameter	Severity	Status
AUTH-001	Minimum Password Length	HIGH	UNABLE_TO_COLLECT
AUTH-002	Password Complexity Required	HIGH	UNABLE_TO_COLLECT
AUTH-003	Maximum Password Age	MEDIUM	UNABLE_TO_COLLECT
AUTH-004	Password History Size	MEDIUM	UNABLE_TO_COLLECT
AUTH-005	Account Lockout Threshold	HIGH	UNABLE_TO_COLLECT
AUTH-006	Account Lockout Duration	MEDIUM	UNABLE_TO_COLLECT
AUTH-007	User Account Control (UAC) Enabled	CRITICAL	PASS
AUTH-008	UAC Consent Prompt Behavior for Administrators	HIGH	PASS
AUTH-009	Automatic Screen Lock Configured	HIGH	PASS
AUTH-010	Automatic Screen Lock Timeout	MEDIUM	PASS

Compliance Calculation

Compliance % =

$$\frac{28}{28} \times 100$$

$$= 28 / 28 \times 100$$

$$= 100.0\%$$

Risk Calculation

Risk % =

$$\frac{0}{28} \times 100$$

$$= 0 / 28 \times 100$$

$$= 0.0\%$$

Coverage Calculation

Coverage % =

$$\frac{4 + 0 + 0}{10} \times 100$$

$$= (4 + 0 + 0) / 10 \times 100$$

$$= 40.0\%$$

Severity Weights & Credit

Severity	Weight	
CRITICAL	10	Immediate risk if failed (e.g. no password required).
HIGH	7	Significant risk if failed.
MEDIUM	4	Moderate risk if failed.
LOW	1	Minor hardening opportunity if failed.
INFO	0	Descriptive/inventory only -- not scored.

Status	Credit Fraction	
PASS	1	Full weight counted toward Compliance.
WARNING	0.5	Half weight counted -- an advisory, not a hard failure.

Status	Credit Fraction	
FAIL	0	No weight counted toward Compliance.

Credit: the amount of a check's weight actually counted toward Compliance, based on its outcome -- weight x credit fraction for its status (e.g. a HIGH-severity check that PASSes earns its full weight; one that WARNs earns half; one that FAILs earns none).

Audit Scale

15 Security Categories | 113 Security Checks

Different Types of Checks Based on Severity

Severity	No. of Checks	
CRITICAL	9	Immediate risk if failed.
HIGH	14	Significant risk if failed.
MEDIUM	31	Moderate risk if failed.
LOW	11	Minor hardening opportunity if failed.
INFO	48	Descriptive/inventory only -- not scored.

113 checks across these five severity types (65 scored). INFO-severity checks are descriptive/inventory only and are not part of the scored severity scale.

Scoring Basis and Security Standards

Severity weights and status credit values are configurable parameters and may be adjusted according to organizational requirements. Both are read from config/severity_config.json at audit time and are the values used directly by the compliance and risk calculations in this report. The security audit framework is designed with reference to established security guidance and industry standards, including CVSS-based severity concepts, DISA STIG, NIST security guidance, CIS Benchmarks, and other applicable security baselines.

These parameters can be customized to align the auditing framework with organizational security policies, risk tolerance, and assessment requirements.

4. Category-wise Results

Category	Compliance	Risk Score	Coverage
Authentication & Access Control	100.0%	0.0%	40.0%
Backup & Recovery	100.0%	0.0%	66.7%
Browser & Internet Security	100.0%	0.0%	100.0%
Data & Storage Security	100.0%	0.0%	57.1%
Device & Peripheral Security	50.0%	0.0%	100.0%
Event & Log Auditing	100.0%	0.0%	25.0%
Firewall & Network Security	82.2%	17.8%	100.0%
Processes & Applications	55.6%	44.4%	100.0%
Remote Access	73.3%	26.7%	75.0%
Services	58.0%	40.0%	100.0%
System & Hardware	100.0%	0.0%	92.6%
System Configuration & Policies	83.3%	0.0%	100.0%
Users & Account Management	61.5%	38.5%	100.0%
Windows Security	28.6%	71.4%	50.0%
Windows Update & Patch Management	53.3%	46.7%	100.0%

Compliance is the share of that category's applicable checks satisfied (credit earned / credit available, weighted by severity). Risk is the weighted share of applicable checks that FAILED. Coverage is the share of that category's checks this run could actually evaluate. See Section 20 for the framework-wide totals and the exact formulas.

5. Authentication & Access Control

Category Summary

10	4	0	0
Total Checks	Passed	Failed	Warnings
6	0	100.0%	0.0%
Unable to Collect	Not Applicable	Compliance	Risk

Result: 4 of 4 applicable checks passed. Coverage for this category: 40.0% (6 checks could not be evaluated).

19. Windows Update & Patch Management

Category Summary

4 Total Checks	3 Passed	1 Failed	0 Warnings
0 Unable to Collect	0 Not Applicable	53.3% Compliance	46.7% Risk

Result: 3 of 4 applicable checks passed, 1 failed. Coverage for this category: 100.0%.

ID	Parameter	Severity	Status	Actual	Parameter Contribution to Category Risk %	Parameter Contribution to Category Compliance %
UPD-001	Windows Update Service Running	HIGH	FAIL	False	46.7%	0.0%
UPD-002	Days Since Last Installed Update	MEDIUM	PASS	1	0.0%	26.7%
UPD-003	Automatic Updates Not Paused	MEDIUM	PASS	False	0.0%	26.7%
UPD-004	Last Installed Update Date	INFO	PASS	2026-09-17T00:00:00	NA	NA
Total					46.7%	53.3%

20. Category / Check Scoring Summary

Framework Totals

Total Categories	15
Total Checks	113
Total Applicable Checks (evaluated)	94
Total number of checks whose status is passed	79
Total number of checks whose status is failed	8
Total number of checks whose status is warning	7
Total Unable to Collect	15
Total Not Applicable	4
Overall Compliance	72.2%
Overall Risk Score	23.6%
Overall Coverage	83.2%

How Category Results Roll Up

Each category's Compliance, Risk and Coverage (Section 4 and Sections 5-19) is computed the same way as the overall score, but scoped to that category's checks alone (see Section 3 for the exact formulas). The overall figures above are the same computation scoped to every applicable check in the entire framework -- not an average of the category percentages, since categories carry different numbers of checks and different severity mixes.

Category Breakdown

Category	Checks	Passed	Failed	Warnings	High	Critical	Medium	Low	Info
Authentication & Access Control	10	4	0	0	5	1	4	0	0
Backup & Recovery	3	2	0	0	0	0	1	1	1
Browser & Internet Security	3	3	0	0	0	0	1	1	1
Data & Storage Security	7	4	0	0	1	1	3	1	1
Device & Peripheral Security	10	6	0	4	0	0	4	0	6
Event & Log Auditing	4	1	0	0	1	0	1	2	0
Firewall & Network Security	14	12	2	0	2	1	5	1	5
Processes & Applications	7	6	1	0	0	0	2	1	4
Remote Access	4	2	1	0	2	0	2	0	0
Services	5	3	1	1	0	2	1	1	1
System & Hardware	27	25	0	0	1	1	1	0	24
System Configuration & Policies	3	1	0	2	0	0	1	2	0
Users & Account Management	6	5	1	0	1	1	2	1	1
Windows Security	6	2	1	0	0	2	1	0	3
Windows Update & Patch Management	4	3	1	0	1	0	2	0	1
Total	113	79	8	7	14	9	31	11	48

21. Failed Checks (8)

ID	Parameter	Severity	Status	Actual
SEC-002	Defender Antivirus Enabled	CRITICAL	FAIL	False
SVC-002	Defender Antivirus Service Running	CRITICAL	FAIL	False
USR-003	Accounts With No Password Required	CRITICAL	FAIL	DefaultAccount; Guest; Sadanand B C
UPD-001	Windows Update Service Running	HIGH	FAIL	False
APP-007	Excessive Installed Programs	MEDIUM	FAIL	74
NET-013	Excessive UDP Endpoints	MEDIUM	FAIL	24
NET-014	Excessive Open Ports	MEDIUM	FAIL	23
RDP-003	Remote Assistance Enabled	MEDIUM	FAIL	True

22. Warning Checks (7)

ID	Parameter	Severity	Status	Actual
DEV-006	Bluetooth Radio Disabled	MEDIUM	WARNING	True
DEV-007	USB Storage Device Connected	MEDIUM	WARNING	6 items
DEV-008	Webcam Access Allowed	MEDIUM	WARNING	Allow
DEV-009	Microphone Access Allowed	MEDIUM	WARNING	Allow
POL-002	PowerShell Script Block Logging Enabled	LOW	WARNING	False
POL-003	Device Installation Restriction Policy Configured	LOW	WARNING	False
SVC-004	Print Spooler Service Running	LOW	WARNING	True

23. Recommended Remediation

[CRITICAL] SEC-002 - Defender Antivirus Enabled

Enable Microsoft Defender Antivirus, or confirm an authorized third-party antivirus is active in its place.

[CRITICAL] SVC-002 - Defender Antivirus Service Running

Start the Windows Defender Antivirus service (WinDefend).

[CRITICAL] USR-003 - Accounts With No Password Required

Require a password for every local account; clear the PasswordNotRequired flag.

[HIGH] UPD-001 - Windows Update Service Running

Start and enable the Windows Update service (wuauserv).

[MEDIUM] APP-007 - Excessive Installed Programs

Review installed programs; uninstall software that is not required for this system's role.

[MEDIUM] DEV-006 - Bluetooth Radio Disabled

Disable the Bluetooth radio (Settings > Bluetooth & devices) if it is not actively required.

[MEDIUM] DEV-007 - USB Storage Device Connected

Disconnect any USB storage device not explicitly authorized for this system, per your organization's removable-media policy.

[MEDIUM] DEV-008 - Webcam Access Allowed

Deny camera access (Settings > Privacy & security > Camera) unless it is actively required.

[MEDIUM] DEV-009 - Microphone Access Allowed

Deny microphone access (Settings > Privacy & security > Microphone) unless it is actively required.

[MEDIUM] NET-013 - Excessive UDP Endpoints

Review active UDP endpoints and their owning processes; investigate any that are unexpected.

[MEDIUM] NET-014 - Excessive Open Ports

Review listening TCP ports and their owning processes; close/disable services that are not required.

[MEDIUM] RDP-003 - Remote Assistance Enabled

Disable Remote Assistance unless actively required for support.

[LOW] POL-002 - PowerShell Script Block Logging Enabled

Enable PowerShell Script Block Logging for improved auditability.

[LOW] POL-003 - Device Installation Restriction Policy Configured

Consider enabling device installation restriction policy to control removable/peripheral hardware.

[LOW] SVC-004 - Print Spooler Service Running

Disable the Print Spooler service on systems that do not need printing.

24. Audit Metadata

Audit Timestamp	2026-09-18T14:34:54
Host Name	DESKTOP-H9H293O
Operating System	Microsoft Windows 11 Home (Build 26200)
OS Build	26200
User Name	Not Collected
Lab	Not Collected
Remarks	Not Collected
Running as Administrator	No
Application	CABS IT AUDITING TOOL
Organization	Not Collected
Ministry	Not Collected
Location	Not Collected
Audit End	2026-09-18T14:34:54
Report Generation Timestamp	2026-09-18T14:34:54
Total Checks	113
Total Categories	15
Report Format	PDF

This audit ran without administrator privileges. Checks that require elevation (BitLocker, local security policy, audit policy, the Security event log, TPM, Secure Boot) are reported as UNABLE_TO_COLLECT (Section 25) rather than assumed. Re-run as Administrator for full coverage.

25. Checks That Could Not Be Completed (15)

Checks that could not be completed and checks that are not applicable reduce audit coverage because these checks do not produce a successful PASS, FAIL, or WARNING evaluation of the corresponding security requirement. Consequently, these checks reduce the coverage percentage (Section 3); a lower coverage percentage indicates that a smaller proportion of the audit checks were successfully evaluated. Checks that could not be completed due to insufficient privileges, unavailable system information, access restrictions, or other collection errors reduce audit coverage because their security state could not be evaluated -- an UNABLE_TO_COLLECT result is not automatically treated as a FAIL.

ID	Parameter	Severity	Status	Actual	Detail
AUTH-001	Minimum Password Length	HIGH	UNABLE_TO_COLLECT	-	Administrator privileges required to export local security policy (secedit)
AUTH-002	Password Complexity Required	HIGH	UNABLE_TO_COLLECT	-	Administrator privileges required to export local security policy (secedit)
AUTH-003	Maximum Password Age	MEDIUM	UNABLE_TO_COLLECT	-	Administrator privileges required to export local security policy (secedit)
AUTH-004	Password History Size	MEDIUM	UNABLE_TO_COLLECT	-	Administrator privileges required to export local security policy (secedit)
AUTH-005	Account Lockout Threshold	HIGH	UNABLE_TO_COLLECT	-	Administrator privileges required to export local security policy (secedit)
AUTH-006	Account Lockout Duration	MEDIUM	UNABLE_TO_COLLECT	-	Administrator privileges required to export local security policy (secedit)
BKP-001	System Restore Enabled	MEDIUM	UNABLE_TO_COLLECT	-	Could not determine System Restore state via Get-ComputerRestorePoint: Access denied
LOG-001	Security Log Size Adequate	LOW	UNABLE_TO_COLLECT	-	Could not retrieve information about the Security log. Error: Attempted to perform an unauthorized operation..
LOG-002	Failed Logon Events (24h)	MEDIUM	UNABLE_TO_COLLECT	-	Attempted to perform an unauthorized operation.
LOG-003	Logon Event Auditing Enabled	HIGH	UNABLE_TO_COLLECT	-	Administrator privileges required to read the local audit policy (auditpol)
STG-001	BitLocker Enabled on OS Drive	CRITICAL	UNABLE_TO_COLLECT	-	Access denied
STG-002	Fixed Drives Without BitLocker	HIGH	UNABLE_TO_COLLECT	-	Access denied
STG-003	Removable Drives Without BitLocker	MEDIUM	UNABLE_TO_COLLECT	-	Access denied
SYS-009	Secure Boot Enabled	HIGH	UNABLE_TO_COLLECT	-	Unable to set proper privileges. Access was denied.
SYS-010	TPM Ready	MEDIUM	UNABLE_TO_COLLECT	-	Administrator privileges required to read TPM state

26. Checks Not Applicable (4)

Checks correctly skipped because their prerequisite didn't hold on this system (e.g. a Bluetooth check when no Bluetooth adapter is present) -- distinct from checks that failed to collect (Section 25). Not Applicable checks are not treated as security failures; however, because they are not evaluated, they reduce the proportion of checks covered by the assessment. Not-applicable checks are excluded from the compliance/risk denominator; see Section 3.

ID	Parameter	Severity	Status	Actual	Detail
RDP-002	RDP Requires Network Level Authentication	HIGH	NOT_APPLICABLE	False	Not applicable: 'rdp_enabled' = False, expected True
SEC-008	Defender Signature Last Updated Date	INFO	NOT_APPLICABLE	-	Microsoft Defender Antivirus is not the active engine on this system
SEC-011	Net Protector Running	CRITICAL	NOT_APPLICABLE	-	Net Protector (NPAV) does not appear to be installed on this system
SEC-012	Net Protector Last Updated Date	INFO	NOT_APPLICABLE	-	Net Protector (NPAV) does not appear to be installed on this system
